

AMENDMENTS

The following listing of Claims will replace all prior versions and listing of claims in the application

1. (currently amended) A method for printer processing comprising the steps acts of:

receiving a print designation to print ~~a document~~ content contained in a personal imaging repository;

constructing ~~an ordering~~ canvas order of graphics for the content;

selecting a graphic to send to a printer according to the canvas order;

getting graphic data for the selected graphic from the personal imaging repository; and

sending the graphic data for printer processing.

2. (currently amended) A method as defined in claim 1, further comprising the act step of getting content formats in which the graphic is available from the personal imaging repository; and selecting a desired format; and

wherein the act of getting comprises getting the selected graphic from the personal imaging repository ~~said getting graphic data step comprises getting the graphic data in the selected format.~~

3. (currently amended) The method as defined in claim 1, wherein the act of constructing a graphic canvas order step comprises constructing a canvas order according to determining a print specification.

4. (original) The method as defined in claim 3, wherein the print specification is one of duplex or booklet.

5. (original) The method as defined in claim 3, wherein the print specification comprises information about a specific print device.

6. (currently amended) The method as defined in claim 1, further comprising the step act of printing the processed graphics data.

7. (currently amended) The method as defined in claim 1, further comprising the step act of determining if all graphics have been printed; and

if there are more graphics to be printed, then selecting a different next graphic to be printed according to the canvas order ~~if said selecting step~~, and repeating the acts of getting and sending performing the other steps for this graphic.

8. (original) The method as defined in claim 1, wherein said graphic comprises a page.

9. (original) The method as defined in claim 1, wherein said graphic comprises less than a page.

10. (currently amended) A system for printer processing comprising:
a first component for receiving a print designation to print ~~a document~~ content contained in a personal imaging repository;
a second component for constructing a graphic canvas order;
a third component for selecting a graphic to send to a printer according to the canvas order;
a fourth component for getting graphic data for the selected graphic from the personal imaging repository; and
a fifth component for sending the graphic data for printer processing.

11. (original) The system as described in claim 10, wherein web content operating within a web browser originating from a web service comprises the first component for receiving a print designation.

12. (original) The system as described in claim 11, wherein the web content comprises the second, third, fourth, and fifth components.

13. (original) The system as described in claim 11, wherein the web service comprises the second, third, fourth, and fifth components.

14. (currently amended) The system as described in claim 10, wherein the fourth component for getting graphic data is operable to get the graphic data from utilizes a graphic store that is part of the personal imaging repository to obtain ~~graphics representing individual graphical elements.~~

15. (currently amended) A program product for printer processing comprising computer readable program code for causing a system to perform the following method-steps acts:

receiving a print designation to print ~~a document~~ content contained in a personal imaging repository;

constructing ~~an ordering~~ canvas order of graphics for the content;

selecting a graphic to send to a printer according to the canvas order;

getting graphic data for the selected graphic from the personal imaging repository; and

sending the graphic data for printer processing.

16. (new) The product of Claim 15, having further computer readable program code for causing the system to:

get content formats in which the graphic is available from the personal imaging repository; and selecting a desired format; and

wherein the act of getting comprises getting the selected graphic from the personal imaging repository in the selected format.

17. (new) The product of claim 15, wherein the act of constructing a graphic canvas order comprises constructing a canvas order according to a print specification.

18. (new) The product of claim 15, having further computer readable program code for causing the system to print the processed graphics data.

19. (currently amended) The product of claim 15, having further computer readable program code for causing the system to:

determine if all graphics have been printed; and

if there are more graphics to be printed, then select a next graphic to be printed according to the canvas order and repeating the acts of getting and sending.

20. (new) The product of Claim 15, wherein said graphic comprises less than a page.
